

# RouterBOARD 711-5Hn

## Quick Setup Guide and Warranty Information

RB711-5Hn is a single chain 5GHz 802.11n wireless device with one Ethernet port.

## First use

- Connect antenna cables to the built in Wi-Fi connectors
- Power the device from Ether1 port with a passive PoE injector

## Powering

The board accepts power with the following modes:

- PoE on Ether1 port, device accepts 8-30V DC input (at the board; higher voltage needed to compensate for power loss on long cables; at least 18V suggested) from non-standard (passive) Power over Ethernet injectors (no power over data lines). The board **does not** work with IEEE802.3af compliant 48V power injectors.

## Booting process

The Ethernet port "Ether 1" has a default IP address for connecting: **192.168.88.1** username is **admin** and there is **no password**. Please connect with your web browser to this IP address and choose Webfig to configure it.

See this page for connection and configuration guides: <http://wiki.mikrotik.com/wiki/Category:Manual>

In case you wish to boot the device from network, for example to use MikroTik Netinstall, hold the S301 button of the device when starting it until it beeps and the LED light turns off and RB711 will look for Netinstall servers.

## Extension Slots and Ports

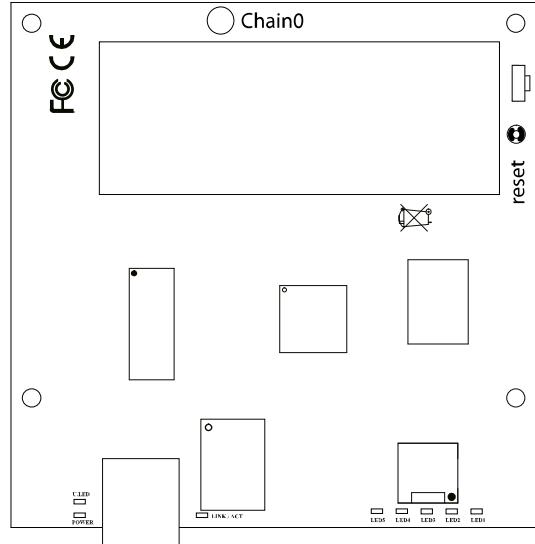

- One 10/100 Ethernet port, supporting automatic cross/straight cable correction (Auto MDI/X), so you can use either straight or cross-over cables for connecting to other network devices. The Ethernet port accepts 8-30V DC powering from a passive PoE injector.
- Built-in 802.11a/n Wi-Fi card with two MMCX/uFL (depends on model) connectors

## Buttons and Jumpers

- RouterOS reset jumper hole (RESET, marked with a black circle in the diagram above, below S301) – resets RouterOS software to defaults. Must short circuit the metallic sides of the hole (with a screwdriver, for example) and boot the device. Hold screwdriver in place until RouterOS configuration is cleared.
- S301 – Holding this button during boot time will make RB711 look for Netinstall servers. Release the button after the LED light goes out.

## Operating System Support

Currently tested operating system is MikroTik RouterOS (starting from version v5). Please only use v5.0 or newer versions.

## Federal Communication Commission Interference Statement (FCC ID: TV7RB711-5HN)

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

**FCC Caution:** Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. This device and its antenna must not be co-located or operation in conjunction with any other antenna or transmitter.

**IMPORTANT: Exposure to Radio Frequency Radiation.** 20 cm minimum distance has to be maintained between the antenna and the occupational user and 45 cm to general public. Under such configuration, the FCC radiation exposure limits set forth for a population/uncontrolled environment can be satisfied.
