

-48V DC telecom-IN (G1382-0350WNA)

This is an optional hot-swap power supply for the CRS804 DDQ. It adds flexible power options, making it suitable for telecom environments and DC-powered installations.

This power module allows the switch to be powered directly from standard -48V DC infrastructure. It can be installed or replaced while the device is running, providing additional redundancy and operational flexibility.

Suitable for carrier-grade deployments, remote sites, and environments where DC power is preferred or required.

• Specifications

Product code	G1382-0350WNA
DC input	39 - 75V, 13A MAX
Output	+12V, 27.5A, +5Vsb, 4A
Output power	350W
Dimensions	40 x 50.5 x 220 mm
